

Gripfast Extrusion Profiles

The Gripfast range is designed to offer customers a quick and easy solution for an aesthetically pleasing edging solution for metal panels, plastic sheet and GRP constructions.

Whilst we offer a wide array of plain elastomer edging solutions as detailed in our Extrusions profile section, Gripfast profiles incorporate a metal reinforcing strip that allows the profile to be pushed over the panel edge and then pinched together to hold it in place.

We currently offer three main types of Gripfast, please click on the drawings for more profiles:

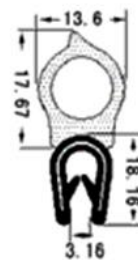

Solid EPDM Carrier with EPDM Sponge Bulb

GFE001

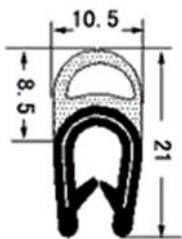

GFE002

GFE003

Reinforced PVC carrier with a Sponge EPDM Bulb

GFCE001
